

Concurrent user licensing

Add and activate two users even if you only have one license

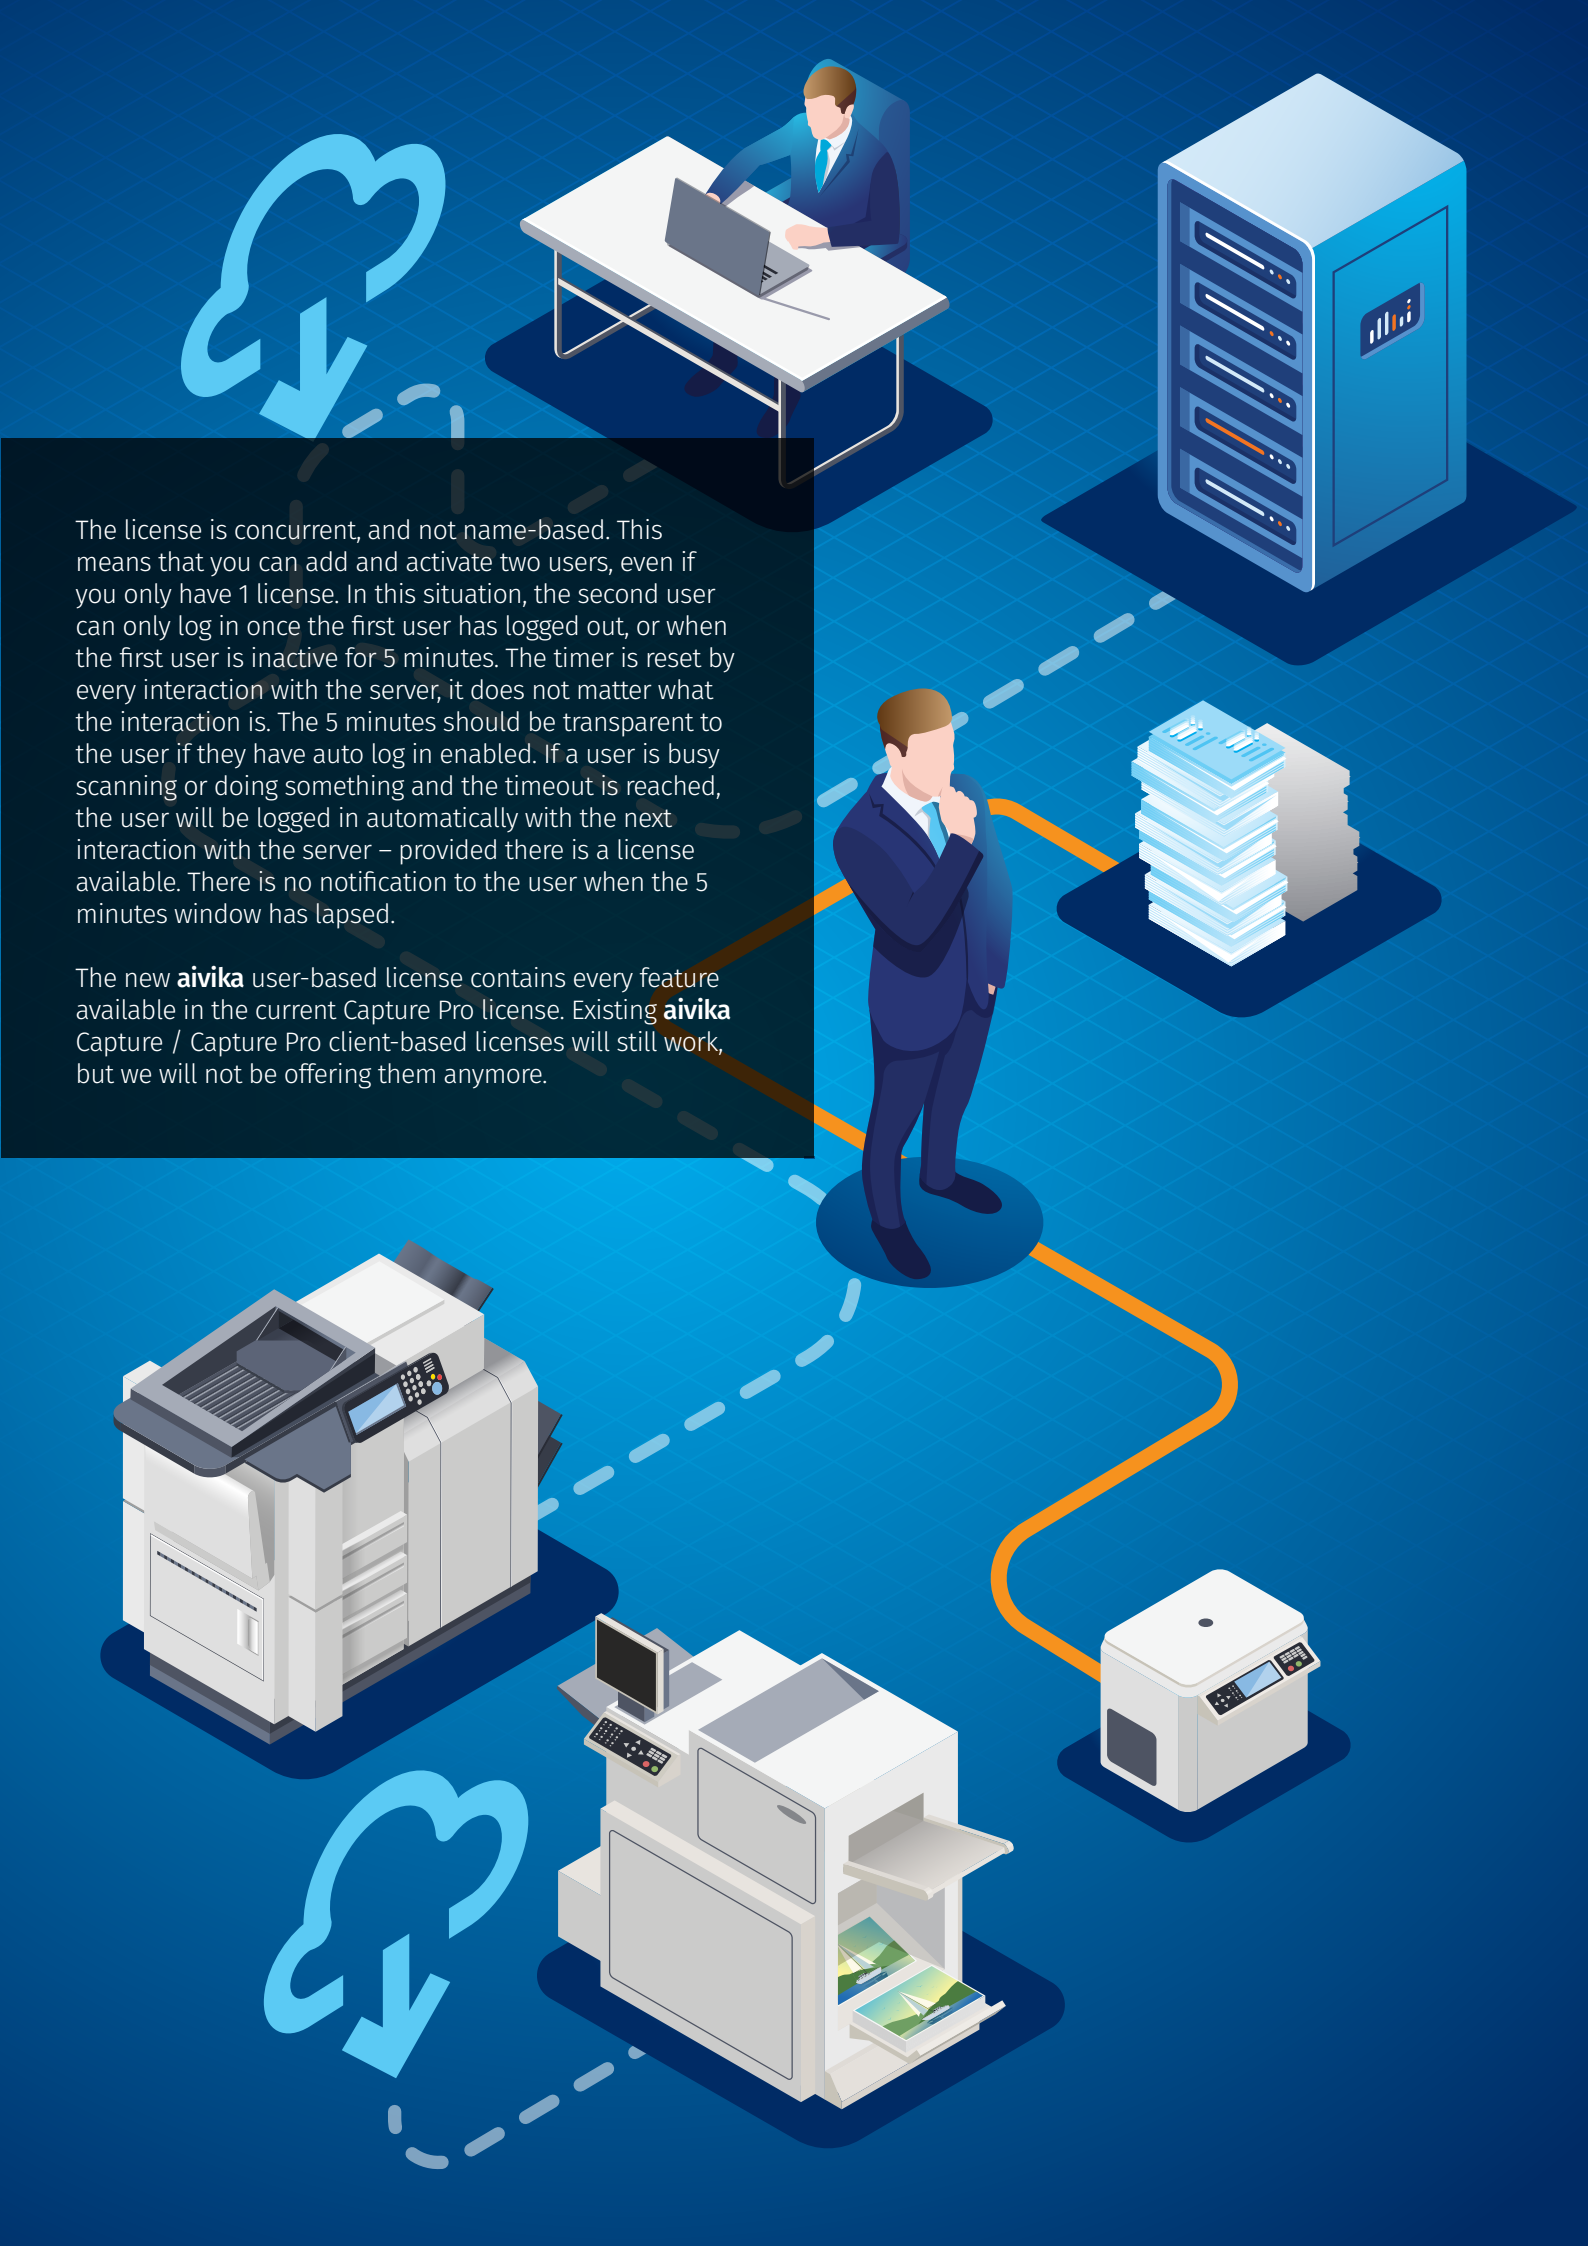

Two users can now share one license whenever one of the users is inactive.

When connecting multifunctional devices to **ScannerVision™**, counting the number of devices (and therefore the required number of licenses) by the number of IP addresses is the logical solution. But when people are using **aivika** to scan, which runs on desktop PCs and mobile devices, this would not work as the IP addresses change regularly, especially when using **aivika** on laptops and mobile devices.

The most logical solution would be to identify the connecting **aivika** client by the user that is being used to log in. This means that the user can work anywhere, without the risk of getting a message about an invalid license because of a changing IP address.

In **ScannerVision™ 9** we are introducing User Based Licensing. Currently this is only applicable to **aivika**. A user can use two types of **aivika** clients at the same time: PC and mobile. It will not work with two clients of the same type at the same time (PC & PC, or mobile and mobile).

The license is concurrent, and not name-based. This means that you can add and activate two users, even if you only have 1 license. In this situation, the second user can only log in once the first user has logged out, or when the first user is inactive for 5 minutes. The timer is reset by every interaction with the server, it does not matter what the interaction is. The 5 minutes should be transparent to the user if they have auto log in enabled. If a user is busy scanning or doing something and the timeout is reached, the user will be logged in automatically with the next interaction with the server – provided there is a license available. There is no notification to the user when the 5 minutes window has lapsed.

The new **aivika** user-based license contains every feature available in the current Capture Pro license. Existing **aivika** Capture / Capture Pro client-based licenses will still work, but we will not be offering them anymore.
