

# v7

You work in HR, Finance, Logistics or any other departments that regularly have to process incoming documents. You need to make sure that all those documents are archived in M-Files, or you still need to decide which document types get archived in M-Files because scanning takes too much time and effort.

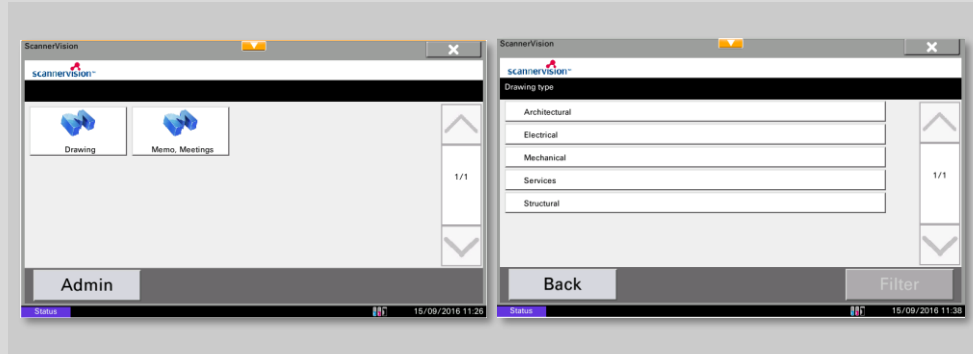

ScannerVision helps you to avoid the complexity of tasks related to scanning documents and archiving in M-Files. By using ScannerVision Processing Engine, combined with ScannerVision's powerful bi-directional M-Files connector and a ScannerVision compatible MFP your documents can be sent to M-Files in a few easy steps.

Because our components integrate seamlessly with M-Files, you can see and select all available document classes and class related properties directly on the display of the MFP. Every possible values that can be selected as the document properties will be retrieved immediately without having to synchronize data between systems. By providing document related properties directly from your MFP you ensure that all important information is assigned to the document before it gets sent to M-Files. The only other thing that you need to do is press the green button on your MFP.

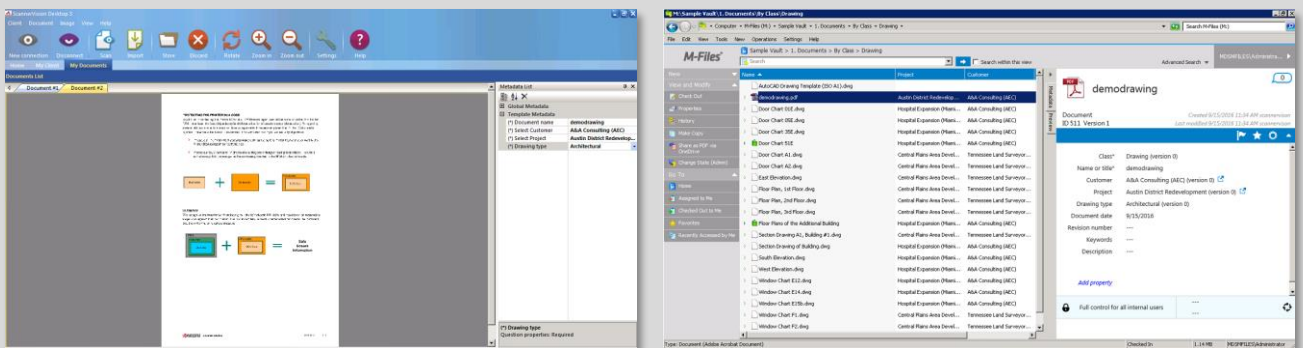

Any business critical documents that need to be scanned in order to be compliant with your business operations can benefit from this quick and easy process. These documents include, but not limited to:

- Invoices
- Contracts
- Purchase Orders
- ID Documents
- Engineering Drawings
- Product Specification
- Certificates
- Correspondence

And every other documents including the ones with classes that are custom made to your specification. Document classes that share similar properties can be grouped in ScannerVision in order to avoid having a scan button for every document class.

By having ScannerVision as your scan solution all your paper documents will be stored, searched and retrieved easily, quickly and reliably.

## Your benefits at a glance:

- Powerful bi-directional communication between ScannerVision and M-Files. No synch. required.
- Access and select data directly from the MFP.
- Utilize OCR to create full-text searchable PDF documents.
- Save and search every business critical document in M-Files.
- Achieve greater efficiency and flexibility when compared to paper archive and file cabinets.
- Combine more powerful features available in ScannerVision such as Barcode Recognition, Image Processing, Forms Recognition and Data Exporting to save even more time and effort.
