Cloud Document Management Made Simple

Kyocera Cloud Information Manager (KCIM) is Kyocera's cloud-based (SaaS) document management platform that securely stores, organizes, and retrieves business documents from anywhere.

It provides a central repository for paper and digital documents, helping organizations improve collaboration, accessibility, and document management in the cloud.

Intelligent Capture Meets Cloud Document Management

The ScannerVision KCIM Connector bridges your multifunction printers with Kyocera Cloud Information Manager, allowing documents to be captured, indexed and stored in real time.

Instead of manually uploading files after scanning, users can send documents directly into KCIM with the correct metadata, improving productivity while reducing errors.

Discover how **ScannerVision** and **Kyocera Cloud Information Manager** can simplify your document processing workflows today!

Key benefits:

Real-Time Cloud Indexing:

Capture and index documents directly into KCIM from the MFP.

Multi-Vendor Device Support:

Connect KCIM to a mixed fleet of devices including:

Kyocera, Triumph-Adler, UTAX, Ricoh, HP, Brother, Epson, Sharp, Fujifilm, Canon (scanner)

Expand Connectivity:

Seamlessly connect with existing electronic documents, facilitating a smooth transition between paper and digital processes.

Flexible Metadata Entry:

Enter document metadata directly at the device before uploading.

Intelligent Data Extraction:

Automatically extract and index document metadata using ScannerVision's intelligent OCR.

Folder Browsing:

Browse and select KCIM destination folders directly from the MFP.

Automatic Folder Creation

Automatically create destination folders in KCIM when they don't already exist.
